Contents

Acknowledgements ii

Chapter 1
Introduction 1-1

Chapter 2
Basic Floor Vibration Principles and Terminology 2-1

2.1 Overview 2-1
2.2 Dynamic Loading 2-1
2.3 Period and Frequency 2-1
2.4 Free Vibration, Natural Frequency and Mode Shape 2-1
2.5 Steady-state and Transient Motion 2-2
2.6 Damping and Critical Damping 2-2
2.7 Resonance 2-2
2.8 Harmonics 2-3

Chapter 3
Acceptance Criteria 3-1

3.1 Overview 3-1
3.2 Acceptance Criteria for Human Comfort 3-1
3.2.1 Overview 3-1
3.2.2 Walking Excitation 3-1
3.2.3 Rhythmic Excitation 3-2
3.3 Acceptance Criteria for Sensitive Equipment 3-4
3.3.1 Overview 3-4
3.3.2 Acceptance Criteria 3-4
3.4 References 3-4

Chapter 4
Vibration Characteristics of Reinforced Concrete Floor Systems 4-1

4.1 Parameters Governing Vibration Response 4-1
4.1.1 Overview 4-1
4.1.2 Floor Stiffness 4-1
4.1.3 Effective Floor Mass (Weight) 4-1
4.1.4 Damping 4-2
4.2 Determination of Natural Frequency 4-2
4.2.1 Overview 4-2
4.2.2 One-way Systems 4-3
4.2.3 Two-way Systems 4-4
4.3 References 4-7

Chapter 5
Examples 5-1

5.1 Overview 5-1
5.2 Example 5.1 – Wide-module Joist System, Walking Excitation 5-1
5.3 Example 5.2 – Wide-module Joist System, Rhythmic Excitation 5-4
5.4 Example 5.3 – Flat Plate System, Walking Excitation 5-5
5.5 Example 5.4 – Voided Slab System, Rhythmic Excitation 5-7
5.6 Example 5.5 – Two-way Joist System, Design for Sensitive Equipment 5-8
5.7 Example 5.6 – Grillage System, Design for Sensitive Equipment 5-10
5.8 References 5-11

Chapter 6
Mitigation and Remediation Strategies for Vibration 6-1

6.1 Overview 6-1
6.2 Mitigation Strategies 6-1
6.2.1 Overview 6-1
6.2.2 Walking Excitation 6-1
6.2.3 Rhythmic Excitation 6-1
6.2.4 Design for Sensitive Equipment 6-1
6.3 Remediation Strategies 6-1

Notation N-1

Appendix A
Vibration Characteristics of a Voided Slab Floor system A-1
