Concrete Reinforcing Steel Institute Announces CRSI HONORS Recipients

(SCHAUMBURG, IL – May 16, 2014) The Concrete Reinforcing Steel Institute (CRSI) has announced the recipients of the inaugural 2013 CRSI HONORS recognition program. For over 40 years the CRSI Design Awards program had recognized design and construction achievement by owners, architects, engineers and construction managers across North America. That program has evolved into CRSI HONORS.

The focus of CRSI HONORS is less the structure itself and more the leadership and innovation demonstrated by design and construction professionals, who under challenging circumstances, leverage material strengths and find ways to make great structures possible. Submittals were reviewed in detail, focusing on the ways in which reinforced concrete was leveraged by professionals and improved the structure's value, sustainability, appearance and durability. Submittals are categorized by Project, Leader, Innovation or Corporate and had to be substantially completed between January 1st, 2009 and March 1st, 2013 and be primarily dependent upon steel reinforced concrete systems.

A total of 30 CRSI HONORS submittals were recognized for their excellence in design and construction among the reinforced concrete industry. Recognitions included an Honors Award, Merit Award and a Special Citation. For a complete list of recipients, please visit the CRSI HONORS website at <http://honors.crsi.org> and click on the Recognition Recipients link.

About the Concrete Reinforcing Steel Institute

Founded in 1924, the Concrete Reinforcing Steel Institute (CRSI) is a technical institute and an accredited Standards Developing Organization (SDO) that stands as the authoritative resource for information related to steel reinforced concrete construction. Serving the needs of engineers, architects and construction professionals, CRSI offers many industry-trusted technical publications, design aids, reference materials and educational opportunities. CRSI Industry members include manufacturers, fabricators, material suppliers and placers of steel reinforcing bars and related products. Our Professional members are involved in the research, design, and construction of steel reinforced concrete. CRSI also has a broad Region Manager network that supports both members and industry professionals and creates awareness among the design/construction community through outreach activities. Together, they form a complete network of industry information and support.
