### **Spanish Language Edition of *Placing Reinforcing Bars* Now Available**

(SCHAUMBURG, ILLINOIS — March 13, 2013) The Concrete Reinforcing Steel Institute has published a Spanish language version of *Placing Reinforcing Bars, 9<sup>th</sup> Edition*. The newest edition of this popular book presents the best accepted current practices in the placement of steel reinforcing bars in reinforced concrete construction and is the first flagship publication from CRSI to be translated into Spanish.

The book is written for apprentices, ironworkers and inspectors working with steel reinforced concrete. *Placing Reinforcing Bars* is typically cited in project specifications, special provisions, and drawings as the definitive resource document for the placement of reinforcing bars on the jobsite.

Eighteen extensively illustrated chapters cover topics such as: materials, handling bars at the jobsite, general principles for bar placing, splicing and tying; placing bars in footings, walls, columns, floors, roofs, pavements and highway structures; and handling and placing of coated reinforcing bars.

The 9<sup>th</sup> Edition revisions include:

- Nylon sling capacity tables according to current OSHA guidelines;
- Updated coverage of mechanical splices according to current *CRSI Reinforcing Bars: Anchorages and Splices* publication;
- Updated welded splice coverage according to AWS D1.4-2011;
- Updated illustrations of standard column ties and special condition column ties;
- Expanded and updated safety precautions coverage emphasizing the importance of jobsite safety;
- Updated coverage of bar supports, spiral fabrication tolerances, and first-bar placement according to the current *CRSI Manual of Standard Practice*;
- Updated and expanded mobile crane and construction tower crane signals, according to ASME B30.3-2009 and B30.5-2007;
- Beam bolsters shown running longitudinally, rather than transverse;
- Expanded coverage to include rail- and axle-steel (ASTM A996), stainless-steel (ASTM A955) and low-carbon chromium (ASTM A1035); and
- Expanded coverage of contractor (dropped) bars.

Other Spanish-language titles for sale in the CRSI webstore include *ASTM Standard Reinforcing Bar Card*, *Manual of Guidelines for Shop Safety*, and *Best Practices: Radius Bending* (handbook and CD).

To order a copy of *Placing Reinforcing Bars, 9<sup>th</sup> Edition*, go to [www.crsi-webstore.org](http://www.crsi-webstore.org) or call CRSI at 847-517-1200.

### ***About Concrete Reinforcing Steel Institute***

Founded in 1924, the Concrete Reinforcing Steel Institute (CRSI) is a trade association that stands as the authoritative resource for information related to steel reinforced concrete construction. Serving the needs of architects, engineers and construction professionals, CRSI offers many technical publications, design aids, software programs, educational seminars, promotional activities, membership functions and design award programs. CRSI members are manufacturers, fabricators and placers of steel reinforcing bar and related products, and professionals who are involved in the research, design and construction of reinforced concrete. Serving the construction market in the United States, Canada and Mexico, CRSI is headquartered in Schaumburg, Ill. with regional offices located across the United States.
